A Passion to Lead

The Quantum™ System

The vended laundry business is changing. Owners today need the versatility to adapt quickly to fluctuations in operating expenses and customers' needs. Features that a few years ago were considered luxuries are now essential components to doing business.

Speed Queen's cutting-edge Quantum™ System, gives owners the power to respond instantly to changes in order to maximize their store's profitability. A Quantum™ Gold Networked store is the ultimate in management ease, enabling owners to modify vend prices or cycles from the comfort of their own home or anywhere they have access to computer. Operations reports and machine data further assist with management and indentifying any potential service problems.

With Speed Queen's advanced network technology and efficient equipment in your store, you'll be assured you're ready to do business in a Quantum™ world.

Quantum™ Gold Control

In addition to its network, and off-site management capabilities, Quantum™ Gold offers a total of 27 cycle combinations on

top load washers (3 cycles, temperatures and modifiers) and customer-centric offerings such as a free "lucky cycle" for loyal customers. PC/PDA programming also is standard, as is four unique time-of-day pricing scenarios. Advanced machine audit data is easily downloaded within seconds to a PDA, while diagnostic features assist with troubleshooting. The Quantum™ Gold control can interface with the store owner's card manufacturer of choice.

Micro-Display Control

Speed Queen's MDC control has four cycle/temperature options and a digital display of vend price and cycle time countdown. MDC washers can be manually programmed and configured for coin or card activation. Some models feature a user-selectable small load setting, which also helps reduce water consumption.

Electromechanical Control

The electromechanical control is clean and easy to use, offering six cycles and three temperature selections. Cue lights keep customers updated on the progress of their cycle.

Convenience

Customers love the convenience a top load washer brings. Simple, intuitive operation and the ability to add forgotten items after the cycle has started contribute to customer satisfaction.

Efficient and Durable

Speed Queen's top load washer helps keep water use in your store low by using as little as 23.7 gallons per cycle. Speed Queen uses durable stainless steel wash tubs that get smoother with each use, meaning they won't snag, pull or fray clothes.

Great Results

Our top load uses a 210-degree wash stroke, the longest in the industry, to produce excellent cleaning results. In addition, a 710 RPM final spin speed extracts more water from loads than many competing top load washers, and that equates to less drying time. An advanced Automatic Balance System ensures even the most out-of-balance loads continue to cycle completion with no stoppages.

Front Serviceable

Simple removal of the front panel or control hood provides easy access for service from the installed position, which means repairs or maintenance can be accomplished quickly to limit downtime.

High Security/Capacity Coin Vaults

Coin vaults feature a double-wrapped steel front and are secured to the washer top with heavy duty bolts. To better accommodate higher vend prices, owners can select an optional larger capacity vault model. The upgraded vault increases capacity to between \$155 and \$175 in quarters, versus the \$135 capacity of our standard vault. This saves owners' time by reducing the frequency of their collections.

Warranty

Speed Queen's commitment to customers comes with an industry-leading warranty, which starts with a three-year limited parts warranty. We also place a five-year warranty on key components such as the frame, cylinder, shaft, bearings and seals.* To us, building the best machines on the market, doesn't mean much if we're not willing to also take the lead in standing behind them. As a Speed Queen customer, you'll never have to worry about our bond.

* Parts only, labor not included. See Speed Queen Warranty Bond for specifics.
